1 Eggs laid in twigs
uniform initialisation, brood labels b_i
4 Final moult, exuvia left on the trunk
micro-emergence near the brood best, archive $\mathcal{A}$
3 Emerge when the clock rings
gate at $(g-\phi_k) \bmod P_k = 0$, only without progress
6 Predators thin the population
linear reduction to $N_{\min}$
above ground
brood clocks $P_k,\ \phi_k$
→ new
5 A failing brood is replaced
macro-emergence after more than θ failed gates
2 Nymphs feed on roots for years
current-to-pbest search, brood memories $M_F,\ M_{CR}$
